Summary:

Accomplished software engineer with 6 years of full-stack development experience. Proven track record of driving results through technical leadership, innovation, and delivery of scalable solutions to complex business challenges

Work Experience:

The Home Depot (Senior Software Engineer) *October 2023 – Present*

- Spearheaded the architecture, development, and deployment of a centralized real-time machine learning-based sponsored product recommendation system, delivering a scalable, flexible platform that enabled five distinct recommendation strategies to be A/B tested and rolled out to customers within two quarters, driving significant lifts in click-through and impression rates across multiple site pages
- Led on time delivery of project to display personalized product listing advertisements (PLAs) within email campaigns which results in ~\$25,000/week in ad spend from ~20 million impressions/week
- Architected an AI agentic system using google-adk and CopilotKit, delivering an interactive data portal that streamlined performance data analysis for internal business stakeholders
- Adapted swiftly to evolving requirements, proactively addressing changes through regular and transparent communication with stakeholders regarding timelines, risks, and blockers
- Supported the growth of junior engineers through mentoring, pairing on tickets, and constructive PR feedback

The Home Depot (Software Engineer II) *March 2022 – October 2023*

- Contributed to the development of a retail media platform for supplier self-service marketing campaign launches, performance monitoring, and advertisement management using React, Node/Express, and PostgreSQL
- Improved developer efficiency and feature delivery time through the introduction of technologies such as the build tool NX, frontend global state management, feature flags, and end-to-end testing with Cypress

Fathom5 (Junior Design Engineer) *July 2021 – March 2022*

- Built and launched a full-stack web application in collaboration with UI/UX partners in a fast-paced startup environment, leveraging React, Go, and PostgreSQL to manage Navy-sponsored hackathons

SpaceX (Manufacturing Engineering Intern) *Summer 2019 and Summer 2020*

- Refined manufacturing processes for the Falcon 9 launch vehicle through process, tooling, and planning improvement projects, resulting in a total yearly savings of ~\$250,000
- Coordinated cross-functionally between four departments and drove to completion the testing, verification, and implementation of a new manufacturing process resulting in a 60% reduction in process time, saving \$75,000/year

Projects:

EarthHero Volunteer Sr. Web Developer (earthhero.org) *September 2023 – March 2024*

- Volunteered for 5 hours per week working on a UI design system overhaul for the website which provides scientifically grounded tools and ideas to empower individuals to reduce carbon emissions

Technical Skills:

- **Languages:** Golang (Go), JavaScript (ES6), TypeScript, Java, HTML/CSS, SQL, Python
- **Frameworks:** React, Node.JS, Express, Echo, SpringBoot
- **CI/CD and Tooling:** Claude Code, Github Copilot, Github Actions, GCP, Prometheus, Grafana
- **Certifications:** Google Associate Cloud Engineer

Education:

North Carolina State University, *Summa cum laude* *2016 – 2021*

- Bachelor of Science in Aerospace Engineering, GPA: **3.91**
